

KleverVet PCR Kits are *in vitro* diagnostic kits designed for the fast qualitative and/or quantitative detection of nucleic acids of **various veterinary pathogens** in laboratory practice by **real-time PCR** with hybridization-fluorescence detection of amplified products.

KleverVet PCR kits have high specificity and sensitivity.

Kits contain special additives which significantly increase resistance to inhibitors. Usage of **uracil-DNA glycosylase** allow to avoid risk of carry-over contamination.

The KleverVet reagent kits use a rapid and simple amplification protocol, resulting in reliable assay results in **70-90 minutes** with minimal risk of operator's error, significantly improving the accuracy of laboratory analyses.

KleverVet PCR Kits are suitable for the most popular real-time PCR instruments. The reagent kits are designed to perform 100 tests.

We also offer **kits for RNA/DNA isolation** based on magnetic beads and spin columns. They can be used in manual or automated modes and are compatible with most popular automatic extraction stations.
